

Book Discussion:
**Climate Change
Adaptation
Traditional Wisdom
and Cross-Scale
Understanding**

**PROF. NALINI BIKKINA,
Applied Psychology**

DATE: 27th Aug 2024 (Tue).

TIME: 3 P.M.

**VENUE: Room No 301 (2nd
Floor), GSHSS, GITAM, Vizag.**

This book is the documentation of the proceedings of a seminar organized with funding support from the United States-India Educational Foundation (USIEF) through the Fulbright Alumni Award in 2021. It discusses how climate change needs to be anchored in indigenous knowledge with reference to resource management, infrastructure, livelihoods, and social institutions, with a unique focus on risks and provenances of resilience available to the local communities. Beyond the scientific know-how on climate change, this volume highlights traditional wisdom, which through its hands-on learning plays a crucial role in amalgamation with cross-scale understanding. It documents the deliberations of a seminar that brought together traditional wisdom and cross-scale understanding of academicians, researchers, practitioners, and grassroots functionaries directly or indirectly working with communities in the area of climate change adaptation and thereby brings together adaptation and allied practices from across a spectrum of specialties and practitioner contexts. It discusses several insights and novel practices and is purported to provide significant research and policy implications in the spirit of thinking globally but acting locally.
